CheckMobi Integration

To integrate with CheckMobi validation, you must first follow these steps under your CheckMobi dashboard.

1. Goto **Settings Account**, **Add new app**, use any name for the app
2. Reload the page and expand **Settings** on the side bar menu and you should now see the new app you just added.
3. Now click on **Add secret key** to generate a new key to use with the WHMCS Module
4. Now you can make any additional changes you want for this app. The settings you want to modify is the SMS and IVR
5. Copy and paste the secret key for the app and fill it in to **WHMCS Setup Addon Modules KeysProvider Configure CheckMobi Key**

The configuration for CheckMobi is now complete.
