

Usage

Importing Keys

To import keys you want to sell, follow these steps

1. WHMCS Addons KeysProvider
2. **Add New Table**, Select either Keys or Login/Pass style **Figure 1**
3. Load the new table you just created and now you will be able to paste your keys/login for selling
4. The **batch ID** is just for you own reference number. It can be left blank.

KeysProvider

mod_keysprovider_0_personal (0)

Load Table

Table Name without pre

Keys

+ Add New Table

Search by Batch ID

Search Provisioned Keys

mod_keysprovider_0_personal (0)

Delete Table

Provisioning

To use the Provisioning module, follow these steps

1. Create a new WHMCS Product
2. Assign the KeysProvider as the Module for the product. **Figure 2**
3. Select the proper **Keys Table** for this product
4. Assign Welcome Emails and other details such as pricing
5. You can now sell this product

Module Name	WHMCS KeysProvider	Server Group	None
Keys Table	mod_keysprovider_0_personal Database table to get the keys from		
Validation	<input checked="" type="checkbox"/> Client must validate before deployment		
Validate Condition	Always When to validate the new order		
Bulk Order	1 want to deploy per order. Set to 1 if you just want to deploy one		
Validate Method	Both When to validate the new order		

Validation (New in v1.4)

With this addition, you can now perform additional customer validation on when a key is purchased. Similar to how [cdkeys.com](#) perform their validation.

You can find the new Validation options in each individual product settings under the **Modules Settings**. **Figure 2**

The default provider we have included in the module is [CheckMobi](#). You can customize it to a provider of your choice. The modules\addons\keysprovider\lib\validation.php file is not encoded. Therefore you can integrate your own provider into that file.

When Validation is enabled for a product. The module will not provision a key for the service until a validation is passed for this service.

Validation Customization (Disable to certain country)

If you want to disable the SMS/Phone to certain countries due to high cost or high fraud rate. You can modify the country list in the following files

```
modules\servers\keysprovider\templates\js\intlTelInput.min.js
modules\servers\keysprovider\templates\js\intlTelInput-jquery.min.js
```

Once the countries had been removed from the list. You will also need to disable it on your provider's end. With CheckMobi, you can find this option under the App's settings.
