

# Server to Server Migration

If you want to migrate a client's domains from one DirectAdmin server to another. You can utilize the Migration function within the module.

Go to the Service Page of the Hosting package for the client

In the middle of the rows, you should see a Migrate option along with other available provisioning server for this module.

|                      |  |
|----------------------|--|
| Module Commands      | <div>Suspend</div> <div>Unsuspend</div> <div>Terminate</div> |
| # of Active Domains  | <div>domaindomain.com</div> <div>Load</div>                  |
| # of Pending Domains | <div>demodomain.net</div> <div>Load</div> <div>Remove</div>  |
| Migrate              | <div>DNS Provision 2</div> <div>Migrate</div>                |

On the next page, you will be able to set which **domains to skip**, **update the plan's server**, and **remove the domains from the source server after migration**

|                             |                          |
|-----------------------------|--------------------------|
| Domain (Active)             | Skip Domain              |
| <div>domaindomain.com</div> | <input type="checkbox"/> |
| Domain (Pending)            | Skip Domain              |
| <div>demodomain.net</div>   | <input type="checkbox"/> |

☒ Switch service server upon migration task completion

☒ Remove domain from source server upon migration task completion

Add to Migration Queue

Once you are ready, **Add to Migration Queue** and the migration will start on the next cronrun.
