

Configure the Server

In order for the module to function, you will need to add the streaming server which your viewers will connect to for viewing.

The page outline how to configure a Server to put it in service.

Configuring a Event Server

In your WHMCS Setup Products/Servers Servers

Click on Add New Server

Servers

This is where you configure all your servers so that WHMCS can cor server for automatic setup to function correctly.

+ Add New Server

+ Create New Group

On the next page you will see the **Add Server** form.

Add Server

Name

Hostname

IP Address

Our module only require the **Name** and the **Hostname** field to be filled in.

For the Hostname field, fill in the whole URL (without ending /) with your application name. For example, <https://streamingserver.com/yourapplication>

Now scroll down to the bottom under **Server Details** and change the **Type** to **PayWall Live Provisioning Module**

Hit **Save Changes** when done.

Configuring a VOD Server

In your WHMCS Setup Products/Servers Servers

Click on Add New Server

Servers

This is where you configure all your servers so that WHMCS can cor server for automatic setup to function correctly.

+ Add New Server

+ Create New Group

On the next page you will see the **Add Server** form.

Add Server

Name

Hostname

IP Address

Our module only require the **Name** and the **Hostname** field to be filled in.

For the Hostname field, fill in the whole URL (without ending /) with your application name. For example, <https://streamingserver.com/yourapplication>

- [Configuring a Event Server](#)
- [Configuring a VOD Server](#)
 - [Public VOD Server - Use with showing trailer or limited version of a video](#)

Now scroll down to the bottom under **Server Details** and change the **Type** to **PayWall VOD Provisioning Module**

Hit **Save Changes** when done.

Public VOD Server - Use with showing trailer or limited version of a video

With the Video's (Allow Public View) option, the videos that are shown to the public (without logging into client area) is loaded from the Public VOD server.

This will be useful for if you want to play a trailer or limited version of the video.

On the public VOD server, simply have the same filenames as the files **non-public** server. The module will then load the same file names on the public server which will show the ***edited version*** of the video.
